

How do I set up my e-mail on my iPhone 3G?

1. Please first make sure that WiFi is turned off under **Settings** on the iPhone. This is to ensure that no restrictions set by a wireless router are encountered while trying to initially set up the account.
2. Next, click the **Mail, Contacts, Calendars** selection.
3. Select **Add Account...**
4. Select **Other**
5. Enter the name you wish to display to others when sending mail, your full e-mail address, and the password for the e-mail account. The description will mirror the e-mail address by default, although you may change it to whatever you like.
6. Select **Save** at the top right.

Wait while the phone saves and then it should display a new screen with extra settings.

7. Make sure that the IMAP button is selected at the top left and you should see the Name, Address, Description and Password should have carried over.
8. Scroll down and enter "imap.kundenserver.de" without the quotes in the Host Name field and your full e-mail address in the User Name field under the **Incoming Mail Server** section.
9. Enter "smtp.1and1.com" without the quotes in the Host Name field and your full e-mail address in the User Name field under the **Outgoing Mail Server** section and enter the password for the e-mail account.
10. Click **Save** at the top right corner.

The account should verify and you will be taken back to the main screen for Mail, Contacts, Calendars and see your newly set up account listed there.
